## Research Interests

I create systems, interventions, and frameworks to measure and mitigate technology-mediated harm. I focus on high-stakes and real-world contexts where platforms, devices and algorithms are central to people's experiences of vulnerability, but where power dynamics make it difficult for individuals to overcome the harm they face (e.g., interpersonal violence, worker exploitation). I develop principled frameworks for improving safety and well-being in these contexts, and build and test systems enacting these frameworks in deep collaborations with affected communities. My work charts new paths in human-computer interaction (HCI) and computer security and privacy (S&P), towards trustworthy and responsible computing.
